## RED BALAU - OUTDOOR PATIO FURNITURE MAINTENANCE GUIDELINES

This product is produced from the 1<sup>st</sup> grade and kiln dried Red Balau wood. Red Balau is a remarkable hardwood which its natural properties include durability and appearance makes it ideally suited for outdoor applications.

In order to maintain and care for your furniture investment, the following guidelines are recommended:

- This product has been treated with Teak Oil on its surface during production; therefore, wipe with clean and dry cloth before using.
- Wood is a beautiful and alive material that continues to respond to the climate. Therefore, when left untreated and seasoned by weather, the exposed surface will naturally turn into a silver grey. To maintain the natural finish appearance, apply teak oil periodically.
- Generally, maintaining and re-coating furniture is related to the amount of exposure to weather. When furniture fully exposed to weather, re-coating at least twice a year. However, in fully protected environment, re-coating furniture at least once a year is sufficient.
- During normal weathering, wood may crack slightly. However, this doesn't affect the structural integrity of the furniture. We recommend checking fittings periodically and re-tightening accordingly. A lifetime is never long enough to exhaust the potential of wood.
